agricultural biocatalysis is of immense scientific interest nowadays owing to its increasing importance in the efforts for more sustainable agriculture while optimizing environmental impacts plant compatibility is essential for developing eco friendly and sustainable microbial products therefore our search for novel technologies ought to be in the foreground for which a thorough understanding of biochemical processes application of agricultural enzymes traits and viruses get the highest priority volumes 8 to 10 in this series compile the recent research on agricultural biocatalysis by interdisciplinary teams from international institutes for chemistry biochemistry biotechnology and materials and chemical engineering who have been investigating agricultural biocatalytic topics related to biochemical

conversions or bioremediation and modern biological and chemical applications exemplified by the use of selected and highly innovative agricultural enzymes traits and viruses the editors are prominent researchers in agrochemistry and theoretical biophysical chemistry and these three volumes are useful references for the students and researchers in the fields of agrochemistry biochemistry biology biophysical chemistry natural product chemistry materials and drug design volume 9 covers the research on plant and soil enzymes herbicide tolerant traits biochemical conversions including aspects from bioremediation plant viruses and evaluation of the agricultural enzymes market

new york magazine was born in 1968 after a run as an insert of the new york herald tribune and quickly made a place for itself as the trusted resource for readers across the country with award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating new york as both a place and an idea

discusses new advancements to improve existing simulations of plant nitrogen written by research pioneers and leading scientists in the area of agricultural systems quantifying and understanding plant nitrogen uptake for systems modeling comprehensively covers plant n uptake in agricultural system models especially for building soil plant system m

an increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat both demands are rooted in an improved understanding of the mechanistic origins of plant development such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes however the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants the research topic morphological plant modeling unleashing geometric and topological potential within the plant sciences is the result of a workshop held at national institute for mathematical and biological synthesis nimbios in knoxville tennessee from 2 4 september 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology in doing so the research topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features as such the research topic bundles examples of new mathematical techniques including persistent homology graph theory and shape statistics to tackle questions in crop breeding developmental biology and vegetation modeling the challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques the introductory white paper written by the workshop participants identifies future directions in research education and policy making to integrate biological and mathematical approaches and to strengthen research at the interface

of both disciplines

with the dawn of the 21st century agricultural research has accelerated due to emerging biotechnological tools notably molecular markers have significantly advanced crop improvement programs achieving food and nutritional security at an accelerated pace progress in the application of molecular markers in agriculture transitioned from simple sequence repeat markers to single nucleotide polymorphism markers with the arrival of next generation sequencing technologies this development initiated a second phase of acceleration for crop improvement programs supporting the development of cultivars with enhanced productivity stress resilience and improved food and nutritional quality advances in biotechnological tools have enabled the development of new diversified crops the power of genomics at an affordable cost has garnered considerable attention as a focal point for present day crop improvement programs

great portraits go beyond a mere record of a face they reveal one of the millions of intimate human moments that make up a life in beyond portraiture renowned photographer bryan peterson shows how to spot those ah ha moments and capture them forever a teary child old people laughing together a smiling girl with big big hair everyone remember pictures like these usually taken by a mother a father a friend holding a camera forever preserving small yet revealing vignettes of our personal histories but we always relied on pure luck and chance to catch those moments peterson s approach explains what makes a photo memorable how to spot the universal themes that everyone can identify with and how to use lighting setting and exposure to reveal the wonder and the joy of everyday moments beyond portraiture makes it easy to create indelible memories with light and shadow
