Discounted Cash Flow (DCF) analysis is the most common technique where projected future cash flows are discounted back to their present value using a discount rate reflecting the risk associated with the investment

Market Approach This compares the subject company to similar companies that have recently been sold Publicly traded comparables or transactions involving privately held companies are used to derive a valuation multiple eg PricetoEarnings ratio Enterprise ValuetetoEBITDA

Asset Approach This method focuses on the net asset value of the companys assets less its liabilities It is particularly relevant for assetheavy businesses or in situations where the goingconcern value is questionable
