specification of drug substances and drug products is a fully comprehensive reference on specification setting for pharmaceuticals there have been several recent developments in the ich guidelines which were not captured in previous editions notably the new guideline on development of analytical procedure and the revisions to the validation guidelines and the specification guidelines this edition contains chapters discussing the unique requirements for the universal critical quality attributes as well as the specific tests required to characterize and control different types of products ranging in complexity from small molecules in immediate release oral dosage forms to complex products such as drug antibody conjugates

and mRNA based products this substantially expanded revision of the 2nd edition will serve as practical comprehensive reference for scientists managers educators and consultants involved in the development and regulation of pharmaceutical products presents critical assessment potential impact and application of the recent revisions to ICH guidelines on method validation Q2 as well as the latest guideline on analytical method development Q14 and the special regional requirements in non-ICH regions addresses comprehensive treatment of the development and validation of analytical methodologies used in the analysis control and specification of a variety of different types of dosage forms ranging from traditional oral solid dosage forms to proteins mRNA based drugs vaccines and gene therapy this book will also address drug device combination products such as digital drug delivery systems transdermal systems and inhalation products presents detailed treatment of latest statistical approaches including new approaches to the treatment of validation data method specification setting and shelf life prediction based on stability data

written specifically for biotechnology scientists engineers and quality professionals this book describes and demonstrates the proper application of statistical methods throughout chemistry manufacturing and controls CMC filled with case studies examples and easy to follow explanations of how to perform statistics in modern software it is the first book on CMC statistics written primarily for practitioners while statisticians will also benefit from this book it is written particularly for industry professionals who don't have access to a CMC statistician or who want to be more independent in the design and analysis of their experiments provides an introduction to the statistical concepts important in the biotechnology industry focuses on concepts with theoretical details kept to a minimum includes lots of real examples and case studies to illustrate the methods uses JMP software for implementation of the methods offers a text suitable for scientists in the industry with some quantitative training written and edited by seasoned veterans of the biotechnology industry this book will prove useful to a wide variety of biotechnology professionals the book brings together individual chapters that showcase the use of statistics in the most salient areas of CMC

bridging the gap between theory and practice this book articulates how to use measurement techniques to assess evaluate and develop more effective programs within various areas of physical education
